02

SG Data Pack: 从遗留数据到可信变更链

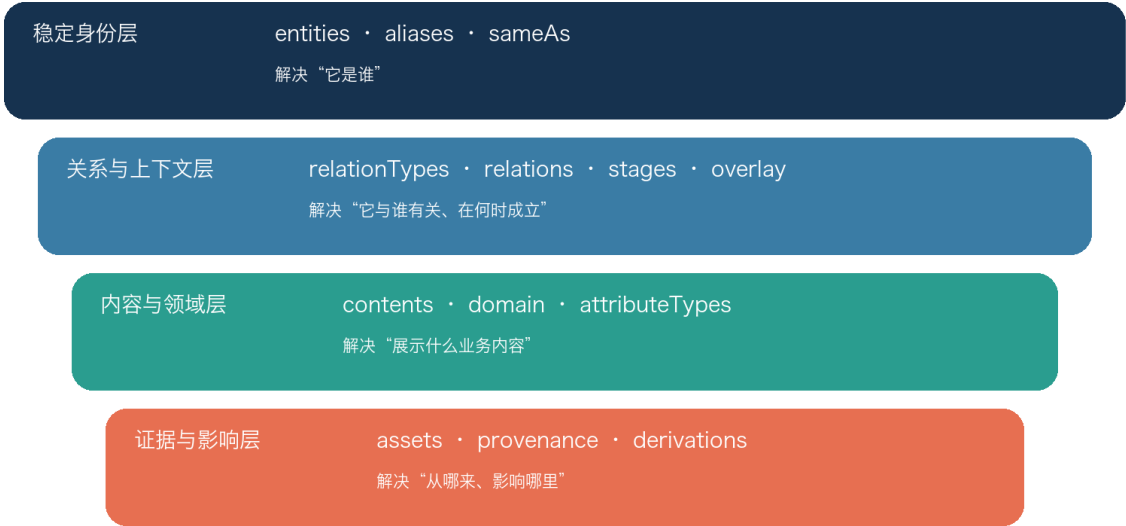

设计重点：规范化不是终点；可验证、可审核、可解释的变更链才是产品核心。

HTML JSON script		Data Pack	
Baseline + crawl records + Decisions		Candidate + Audit	
Validation + Rules + Diff + Evidence		RunReport	CI

- Data Pack renderer __fromPack options
- Fail closed
- SHA-256 “ ”
-
- domain

03 Data Pack

Data Pack 的分层结构

通用核心保持严格；组件库差异进入 domain，并由库级 schema / rules 补充。

entities	ID
aliases	canonical ID
relationTypes / relations	master edge
stages / overlay	
contents / domain	
assets	hash
provenance	
derivations	

04

```
entities.chengbing = { kind: "person", name: " " }
aliases[" "] = "chengbing"
relations[0] = { a: "chengbing", b: "wangdayong", type: "rival" }
```

ID

+

```
relations: [
  { id: "a-b-advisor", a: "a", b: "b", type: "advisor", scope: ["stage-1"] }
]

stages: [
  { key: "stage-1", entities: ["a", "b"],
    relations: [{ a: "a", b: "b", id: "a-b-advisor" }],
    overlay: { a: { role: " " } } }
]
```

-
- scope stage ref
- overlay
- Diff

contextual alias	context	id
a → b		canonical ordering
relation identity	type/scope	provenance key
ID rename/migration		

05

__fromPack

Data Pack options Branch by Abstraction

renderer	Data Pack
JSON renderer	
Data Pack → __fromPack → options	deep equivalence

- 4.
- 5. Acorn parseExpressionAt
- 6. buildPack entities aliases relations domain
- 7. __fromPack defaults deep-equal
- 8. data.json data.js data.schema.json

□ □ □ □			
extraction config		literal	DOM mount

- Data Pack engine fallback
- ctx
- new Function require config require engine
- CI compile --check / compare-existing fallback

06 Fail Loudly

JSON Schema	schemaVersion	meta	relation item
SGDataLoader	stage	provenance	derivation
	path		

E1-E16

	schemaVersion	meta.id	meta.title
	slug	alias target	ID
	scope	stage edge	resolution
		hash	
	sameAs	record/field	provenance
		sourceUrl	confidence
	derivation kind	source	alsoTouches consumers affects

mount	CI		
JSON Schema		loader	
Warnings		strict/non-strict	
Node	UMD	validate	500+

07

provenance

provenance

```
provenance.entities.alice = {
  origin: "crawl:reviewed",
  sourceUrl: "https://example.test/source",
  confidence: 0.95,
  fieldOrigins: { occupation: { origin: "crawl:reviewed", confidence: 0.95 } }
}
```

derivations

```
derivations.carouselTrack = {
  kind: "repeat",
  source: "domain.carouselTrack.entityIds",
  alsoTouches: ["entities.*"],
  consumers: ["components/carousel-item.js"],
  affects: [".carousel-track"],
  note: " "
}
```

provenance			
confidence + threshold		review	
derivation source	Diff		
affects / consumers		validator	selector

08

证据分层：每一层只证明它真正覆盖的范围

关键原则：不能用低层证据替代高层证据。JSON deepEqual 通过，不等于页面视觉已经验证。

“JSON” “Schema” “deepEqual” “SG Data Pack” assurances
